

Personalised visual elements

Logo

Your logo will be used in the app UI but can also be overlaid on your finalised photos.

For example, the logo can be placed in the top right corner (or another placement of your choice). It is then necessary that the logo has a good contrast compared to the photos to stay visible.

If your logo is thin and cut out, it might be good to add a white or coloured background to it.

preferred file formats:
JPEG, PNG, GIF

Banner

If you wish to add a banner to your photos, it is possible.

All you have to do is create a banner that will look good in a landscape-oriented image (finalised photos have a 1920px x 1080px ratio).

The banner height must not be too important to avoid masking a part of the vehicle.

The banner can be placed on top or bottom in the photos.

preferred file formats:
JPEG, PNG, GIF

Replacement plate

myCarlab has the feature to automatically replace the licence plates from your vehicles.

You can then create a replacement plate displaying your logo, not only to mask the original plates but also to give a more personalised aspect to your photos.

A template is available at the link below and is editable with **Photoshop** (paid software) or **GIMP** (free).
